

ARROW INTERNATIONAL'S RESPONSIBILITIES

Partnership

"The trust and responsibility that successful partnerships create is both powerful and humbling."

Working in partnership with our clients is our preferred approach. This demands absolute integrity, and ability to find win:win solutions and a willingness to take responsibility.

Health & Safety

"Every worker or visitor to our sites deserves to come home safely."

Arrow has an enviable Health & Safety record, however, there is no complacency. As leaders of design teams and construction sites, we take direct responsibility for ensuring that safety is addressed.

Sustainability

"Environmental sustainability is not a fad, it is a reality for capital works projects and for each of us."

As project leaders, we have a responsibility to ensure sustainability issues are fully considered by clients on all projects. Likewise, we have a responsibility to continue to minimise our own impact on the environment.

The Construction Industry

"The second oldest industry continues to need it's mentors to invest in it."

The construction industry faces a number of challenges in today's market. These include: training and the attraction of youth to the industry; the take-up of environmentally sustainable practices; and the need to address the value gap that UK programmes such as Constructing Excellence have identified.
